**RATHBONE
INCOME FUND**

**Task Force on Climate-Related
Financial Disclosures Product
Report**

June 2025

YOUR PORTFOLIO’S IMPACT ON CLIMATE CHANGE

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2024 to 31st December 2024. Calculation date 31st December 2024.

Rathbones’ approach to governance, strategy, risk management and Group / Entity level metrics can be found in the Group / Entity TCFD report. A glossary of terms used in this document can be found here - <https://www.rathbones.com/ri-glossary>. The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures.

WEIGHTED AVERAGE CARBON INTENSITY (WACI)			
The carbon intensity of the fund weighted by the amount invested in each company, which serve as a measurement of emissions performance of the fund (for Scope 1+ Scope 2). This is calculated in tonnes CO ₂ e divided by £M sales.			
2023		2024	
105.6 tonnes CO ₂ e/£M sales	108.4 tonnes CO ₂ e/£M sales Benchmark name: FTSE All-Share Index*	119.0 tonnes CO ₂ e/£M sales	96.5 tonnes CO ₂ e/£M sales Benchmark name: FTSE All-Share Index*
Data coverage 96%	Data coverage 93%	Data coverage 96%	Data coverage 96%

TOTAL CARBON FOOTPRINT			
The total carbon emissions of the fund divided by the total value of the fund. This is calculated in tonnes CO ₂ e divided per £M invested.			
2023		2024	
65.2 tonnes CO ₂ e/£M sales	87.4 tonnes CO ₂ e/£M sales Benchmark name: FTSE All-Share Index*	77.3 tonnes CO ₂ e/£M sales	70.7 tonnes CO ₂ e/£M sales Benchmark name: FTSE All-Share Index*
Data coverage: 96%	Data coverage 93%	Data coverage 96%	Data coverage 96%

Fund Manager’s Commentary:- Carbon intensity and the total carbon footprint for the fund slightly increased in 2024. This can be attributed to a heavier weighting in sectors such as consumer staples and real estate with a higher carbon footprint.

YOUR PORTFOLIO’S IMPACT ON CLIMATE CHANGE (CONT’D)

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2024 to 31st December 2024. Calculation date 31st December 2024.

Rathbones’ approach to governance, strategy, risk management and Group / Entity level metrics can be found in the Group / Entity TCFD report. A glossary of terms used in this document can be found here - <https://www.rathbones.com/ri-glossary>. The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures.

SCOPE 1 AND 2 GREENHOUSE GAS EMISSIONS

The sum of the total operational emissions from securities within the fund.
This is calculated in tonnes CO₂e.

2023		2024	
43,023 tonnes CO ₂ e	57,656 tonnes CO ₂ e/£M sales Benchmark name: FTSE All-Share Index*	45,231 tonnes CO ₂ e/£M sales	41,360 tonnes CO ₂ e/£M sales Benchmark name: FTSE All-Share Index*
Data coverage 96%	Data coverage 93%	Data coverage 96%	Data coverage 96%

Fund Manager’s Commentary:- Scope 1 and 2 greenhouse gas emissions were up slightly in 2024, this was again attributed to a larger allocation of companies in the consumer staples and real estate sectors. Both these sectors generally struggle to reduce their total operational emissions due to the energy intensive nature of their business models.

SCOPE 3 GREENHOUSE GAS EMISSIONS

The total indirect emissions that the fund is responsible for, within its value chain, including: employee travel, waste disposal, leased assets and franchises.

2023		2024	
627,930 tonnes CO ₂ e	637,154 tonnes CO ₂ e/£M sales Benchmark name: FTSE All-Share Index*	556,192 tonnes CO ₂ e/£M sales	483,929 tonnes CO ₂ e/£M sales Benchmark name: FTSE All-Share Index*
Data coverage: 96%	Data coverage 93%	Data coverage 96%	Data coverage 96%

Fund Manager’s Commentary:- Scope 3 greenhouse gas emissions were down in 2024. This is due to the decrease in exposure to industrial companies that had a larger scope 3 carbon footprints. As scope 3 emission reporting isn’t yet an exact science scope 3 emission data will continue to be potentially volatile in the coming years.

IMPLIED TEMPERATURE RISE

IMPLIED TEMPERATURE RISE

The Implied Temperature Rise (ITR) is a forward-looking metric which provides an indication of how well the fund aligns with the ambitions of the Paris Agreement calculated in degrees Celsius.

2.2°C ITR Figure

Rathbone Income Fund

1.5 - 2°C

Paris agreement target

HOW DO THESE SCENARIOS ALIGN TO PARIS AGREEMENT COMMITMENTS?

The Paris Agreement's central aim is to strengthen the global response to the threat of climate change by keeping the global temperature rise this century to well below 2 degrees Celsius above pre-industrial levels

SCENARIO ANALYSIS

Climate value at risk (CVaR) attempts to assess the potential financial loss or gain from the portfolio as a result of climate change, including the impact of: Climate policy; New technology opportunities; Physical risks.

The 3 scenarios of climate change which we have assessed shows how a global temperature increase of between 1.5C and 3C by 2100 may impact your portfolio. We calculate these using MSCI's Climate Value-at-Risk (Climate VaR) methodology.

	ORDERLY TRANSITION		DISORDERLY TRANSITION		HOT HOUSE WORLD	
Global temperature rise	+ 1.5C		+ 1.5C		+ 3.0C	
Application of climate policies	Climate policies are introduced and gradually become more stringent		Climate policies are delayed or inconsistent across countries		Global efforts are insufficient to halt significant global warming	
Your portfolio	2023	2024	2023	2024	2023	2024
Climate value at risk (Data coverage: 95.7%)	-14.3%	-17.4%	-17.5%	-19.2%	-6.0%	-6.4%
Benchmark (FTSE World Index)						
Climate value at risk (Data coverage: 96.8%)	-16.2%	-13.6%	-18.0%	-15.2%	-6.1%	-5.0%
Climate scenarios Climate scenario analysis helps us understand the implications of possible climate scenarios on our investment portfolio, and the resilience of our investment strategies in the transition to a net zero economy. Our approach to scenario analysis involves assessing the exposure of our equity and corporate bonds holdings by applying MSCI's Climate Value-at-Risk (Climate VaR) methodology.	Orderly transition scenarios assume climate scenarios assume climate policies are introduced early and become gradually more stringent. Both physical and transition risks are relatively subdued		Disorderly scenarios explore higher transition risk due to policies being delayed or divergent across countries and sectors. Carbon prices are typically higher for a given temperature outcome		Hot house world scenarios assume that some climate policies are implemented in some jurisdictions, but global efforts are insufficient to halt significant global warming. Critical temperature thresholds are exceeded, leading to severe physical risks and irreversible impacts like sea-level rise.	

Fund Manager's Commentary:- For both the orderly and disorderly scenarios the climate value-at-risk is high as some of the companies the fund is invested in are exposed to high emission industries such as the energy sector. Some companies held within the fund are also more likely to be negatively impacted by a faster climate transition as they will need to accelerate their strategies towards a lower carbon future. Companies are regularly reviewed, and their low carbon transition plans are taken into account as part of evaluating their risk profile. The fund also invests in companies that have exposure to low carbon technologies, products and services that form part of the climate transition. This lowers its climate value-at-risk.

ADDITIONAL INFORMATION

The information in this report is provided for information only and should not be taken as financial advice or a recommendation.

The value of investments and the income from them may go down as well as up and you may not get back your original investment. Past performance should not be seen as an indication of future performance.
