### Rathbone Multi-Asset Strategic Growth

**Portfolio Benchmark:** Our benchmarks are calculated on the rate of change of the CPI index, over different time periods (e.g. if we were calculating year to date figures in January 2013, we would look at the percentage change from December 2012 to the end of January 2013). So we take CPI to the current value, and add on the 3% prorated over a year (roughly 0.25% per month). If the CPI Index benchmark were to fall, more than the amount pro-rata, the benchmark year-to-date will be negative, even though inflation as reported by the media (calculated specifically as a 12M rate of change), remains positive.
